Offset

LENTICULAR

A technology in which lenticular lenses are used to produce printed images with an illusion of depth, or the ability to change or move as the image is viewed from different angles.

LETTERPRESS

This 15th Century printing technique, when combined with beautiful typography, can deliver classic and vintage style impressions. A truly timeless craftsmanship work.

HOT FOIL STAMPING

A post-press process where a heated die transfers metallic or pigmented foil onto a solid surface of various substrates.

COLD FOIL

Cold foiling is part of the offset printing process and can deliver several benefits that hot foil stamping cannot achieve, including gradients and multi-colours.

At 101 Print we understand the importance of **service, quality, cost and time** on every print job!

Service: We offer a 'one-stop' service from pre-press to post-press.

Quality: Every artwork is preflight checked and every job is quality inspected before dispatch.

Cost: We offer our clients competitive pricing as well as cost effective solutions to meet their targets.

Time: Most products can be dispatched in 72 hours and we always endeavour to meet your deadline.
